6.	(Cancelled)
7.	(Currently Amended) The A method of claim 1 further comprising: reporting an ability of a processor to support said a processor mode that enables guest software to operate at a privilege level intended by the guest software, using one of a plurality of reserved feature bits that are returned in a processor
·	register <u>, and</u>

PATENT

42390P9770

- 8. (Cancelled)
- 9. (Currently Amended) The A method of claim 8 wherein generating one of the plurality of interrupts and exceptions further includes comprising:
 - running guest software in a processor mode that enables the guest software to operate at a privilege level intended by the guest software:
 - identifying the an attempt of the guest software to perform the an operation restricted by said processor mode; and
 - determining that the attempt of the guest software would succeed if the guest software was running outside said processor mode; and
 - exiting said processor mode to transfer control over the operation to a virtual machine monitor running outside said processor mode.
- 10. (Cancelled)
- (Currently Amended) The A method effelaim 8 further comprising:

 running guest software in a processor mode that enables the guest software to

 operate at a privilege level intended by the guest software;

 identifying an attempt of the guest software to modify an interrupt flag;

 if the interrupt flag controls masking of interrupts, exiting said processor mode to

 transfer control over the operation to a virtual machine monitor running

 outside said processor mode; and

PATENT

42390P9770

modifying the interrupt flag if the interrupt flag does not control masking of interrupts.

- 12. (Cancelled)
- (Currently amended) The A method of claim-12 wherein preventing comprising:

 running guest software in a processor mode that enables the guest software to

 operate at a privilege level intended by the guest software;

 identifying an the attempt of the guest software to modify an the interrupt flag;

 and

 preventing the attempt of the guest software to modify the interrupt flag.

 including:
 - includes providing if a shadow interrupt flag is provided, allowing for modifications by the guest software to modify the shadow interrupt flag; and
 - if the shadow interrupt flag is not provided, exiting said processor mode to
 transfer control over the operation to a virtual machine monitor
 running outside said processor mode.
